

pVault Minimum Hardware / Software Requirements

Server Requirements

Operating System:

Windows Server 2003 Standard, Enterprise, or Datacenter Edition with SP 1 or later; Windows Small Business Server 2003 with SP 1 or later; Windows Server 2008 Standard, Enterprise, or Datacenter Edition with SP 1 or later

Processor:

600-megahertz (MHz) Pentium III-compatible or faster processor; 3.0-gigahertz (GHz) or faster processor recommended.

Memory:

1 gigabyte (GB) of RAM minimum; 2 gigabytes (GB) or more recommended.

Storage Space:

Depends upon number of documents stored in system. 30 – 40 gigabytes will store approximately 1 million documents. We recommend a minimum of 20 GB to start. Storage of documents can be located locally on database server, other server on LAN, or any SAN storage device.

SQL Database:

Microsoft SQL Server 2000 SP4 or later; Microsoft SQL Server 2005 SP3 Express, Workgroup, Standard or Enterprise edition; Microsoft SQL Server 2008 Express, Workgroup, Standard or Enterprise edition MS SQL server licensing can be installed with processor licensing or Server plus user CAL licensing.

See <http://www.microsoft.com/sql/howtobuy/sqlserverlicensing.mspx> for additional information on licensing

Workstation Requirements

Operating System:

Windows XP with SP 2 or later; Microsoft Vista with SP1 or later; Microsoft Windows 7 (with all available service packs)

Processor:

600-megahertz (MHz) Pentium III-compatible or faster processor; 3.0-gigahertz (GHz) or faster processor recommended.

Memory:

512 megabytes (MB) of RAM minimum. 1 gigabyte or more recommended.

Storage:

200 megabytes (MB) available hard disk space to install program.

Email Requirements

Email functionality from pVault currently supports Microsoft Outlook 2003/2007, with all available service packs installed.

Lotus Notes is supported in a standalone desktop environment only. Lotus Notes installed on a Terminal/Citrix Server in multi-user mode is not supported.

Terminal Services

If using pVault in a terminal services environment, we DO NOT communicate with your desktop and locally installed applications. More specifically, email and tiff printers will not function if not installed on the terminal server. In order to print into pVault from a terminal server installed application, pVault TIFF printer for Terminal Services must be installed (sold separately).

Citrix Server

Running pVault from a Citrix desktop has the same limitations as terminal services (see above). Email and tiff printing is NOT supported if pVault is running as a published application.

Microsoft .NET Framework Requirements

Microsoft .NET 2.0 with all current service packs is required to run pVault. .NET 3.5 is recommended.
